

Safety glasses come in a variety of styles to offer you protection against debris, chemicals, dust and the sun's harmful UV rays. Lens color can also affect your eye safety. Selecting the appropriate lens color for the task at hand is an important for the health of your eyes as well as your comfort. Wear the right pair for the right conditions.

One of our most popular lenses is the Indoor Outdoor lens. The I/O lens is versatile, in that it can be used both indoors and out, without any concerns of color distortion. It is especially useful when trying to reduce excessively bright or glaring light without significant dimming as a gray lens might cause.

These lenses allow more visible light transmission than gray lenses and are a good in-between shade for workers who frequently move from indoors to outdoors. Lightly tinted to allow enough light through to see in indoor lighting, but still able to reduce intense sunlight, eyestrain and glare when outside.
